The Kann Load-and-Go™ High Compaction Commercial Side Loader Square Body is designed to collect up to 4 yd<sup>3</sup> commercial side load containers and up to 300 gallon carts. This model features a cross cylinder powered compactor blade with a follower cover that is designed to maximize payloads and give the operator the ability to load and pack-on-the-go, so the operator never has to wait or worry about blade position or about dumping commodity behind the blade. In fact, the KANN Models SLC and SLEC are the only commercial side loaders on the market today that offer load and pack-on-the-go capabilities. These models are available in full eject or tip-to-dump commodity unloading.

The Kann Low Profile Commercial Side Loader Square Body with Round Top aptly nicknamed the "treehugger" features the same durable quality body and loading mechanism design as all the other Kann Commercial Side Loaders, but the rounded top roof feature makes this unit more tree and overhead wire friendly. This unit also features a cross cylinder powered commercial front loader blade for moderate compaction and a fast compactor cycle time of only 14 seconds. This unit is by design the lowest height and overall profile commercial side loader on the market today! This model is full eject for quick and easy commodity unloading.
